

GROB UK LAUNCH G350 GENERATION 2 EDGE CAM TECHNICAL PARTNER

Edgecam is a market leading computer aided manufacturing (CAM) system for NC part programming. With unparalleled ease of use and sophisticated toolpath generation, it's the only CAM system you'll need for milling, turning and mill-turn machining.

Edgecam utilises your in house knowledge and experience to drive the CAM process with automation tools to suit different applications - allowing you to maintain your competitive edge.

GROB Partners With Edgecam to Launch 2nd Generation G350

Machine tool specialists, GROB, are partnering with Edgecam CAD/CAM software to launch the second generation of their popular G350 horizontal 5-axis machining centre.

The machine has a smaller footprint, faster chip to chip times, and increased tool storage capacity.

It is being launched at a two day Open House to be held at CIS, on the High Wycombe Business Park, High Wycombe, on May 10 and 11.

GROB Machine Tools UK Ltd Managing Director Louis Hill says the new machine is extremely flexible, making it ideal for a wide variety of industry sectors, including aerospace, automotive, mould and die, and medical.

“It’s essential for GROB to have a CAD/CAM partner, and Edgecam provides the latest machining strategies required for the demanding products and work pieces which are becoming increasingly widespread.”

Delegates at the Open House will see the second generation G350 carrying out machining demonstrations, programmed with Edgecam to produce an aerospace structure from a solid aluminium billet. The event demonstrates the entire life cycle of the part, from design, through manufacture, to inspection.
